EdgeRemit

Nigeria remittance timing & fees — on the edge

Local intent routing with Intel OpenVINO (CPU)

Joshua Jubelo · Quantumwoof · Nigeria · MIT

The problem

- Diaspora sends USD → family in Nigeria needs ■ for rent, school, hospital.
- Operators (Wise / Remitly / bank) quote different all-in costs and speeds.
- People ask: rate this week? which rail? send now or wait? what docs?
- Cloud-only chatbots struggle on flaky mobile data and ship private money talk off-device.
- Judges need a clear edge story: classify intent locally, then answer with practical tools.

Edge-shaped problem:

spotty connectivity · sensitive questions · no need to ship every utterance to a remote LLM

Solution — EdgeRemit

1

Local intent routing

Intel OpenVINO on CPU
DEMO + LIVE paths
same Intent enum

2

Deterministic tools

Rate snapshot · fee table
Wait-vs-send advice
Next-steps checklist

3

Judge-ready UI

Streamlit one-command
CLI --demo-once
No API keys required

4

Optional voice

Speechmatics STT stub
Never blocks the demo
Bonus path only

Estimates are hackathon demos, not live operator quotes. EdgeRemit decides — it does not send money.

Architecture

Router: DEMO path (keywords) · LIVE path (OpenVINO CPU: BoW → MatMul → SoftMax)

Intents

rate_check

fee_compare

send_now_advice

checklist

general

Intel Online anale

Edge AI

Intel OpenVINO Runtime — BoW → MatMul → SoftMax on CPU

DEMO path

Keyword/heuristic router; logs “DEMO OpenVINO path”; always works offline

LIVE path

LIVE_OPENVINO=1 compiles a real ov.Model and runs inference on CPU

Why OpenVINO

Tiny on-device classifier → low latency, offline-friendly, private money talk

Honest MVP

DEMO always judges; LIVE when package present; fallback if compile fails

What's next

Train classifier → ONNX → OpenVINO IR; live FX; Speechmatics realtime mic

Demo flow (~4 minutes)

- 1 Install** `pip install -r requirements.txt · no API keys`
- 2 UI** `DEMO_MODE=1 streamlit run app.py`
- 3 Rate** Example #1 — USD→NGN rate check
- 4 Fees** Example #2 — \$500 Houston → Lagos fee compare
- 5 Timing** Example #3 — rent Friday → send now + checklist
- 6 Proof** Sidebar OpenVINO status · CLI: `python main.py --demo-once`

Close: “Confirm the live rate in-app. EdgeRemit decides; it does not send.”
Smoke test exits 0 with `DEMO_MODE=1` — judges can verify offline.
